

options

```
classDiagram
    class options {
    }
    class "asn1::rrc_nr::fail_info_rlc_bearer_s::fail_type_opts" {
    }
    options o-- "asn1::rrc_nr::fail_info_rlc_bearer_s::fail_type_opts" : +value
```

The diagram shows a class 'options' at the top with two empty compartments. Below it is a class 'asn1::rrc_nr::fail_info_rlc_bearer_s::fail_type_opts' with three compartments. The first compartment contains the class name. The second is empty. The third contains '+ to_string()'. A blue line with an open diamond at the 'options' end connects to the first compartment of the lower class. To the right of the line is the label '+value'.

+value

asn1::rrc_nr::fail
_info_rlc_bearer_s::
fail_type_opts

+ to_string()
