

std::true_type

```
graph BT; A["is_char< detail::char8_type >"] --> B["std::true_type"]
```

The diagram illustrates a relationship between two C++ type traits. At the bottom is a box for `is_char< detail::char8_type >`, which is shaded gray and divided into three horizontal sections. At the top is a box for `std::true_type`, which is white and also divided into three horizontal sections. A blue arrow points from the top of the gray box to the bottom of the white box, indicating that `is_char< detail::char8_type >` inherits from or is a specialization of `std::true_type`.

is_char< detail::char8
_type >
