

std::false\_type

```
graph BT; A[detail::is_named_arg< T >] --> B[std::false_type];
```

The diagram illustrates an inheritance relationship between two C++ type traits. At the bottom is a box for `detail::is_named_arg< T >`, which is divided into three horizontal sections. The top section contains the text, while the two bottom sections are empty. Above this box is a box for `std::false_type`, also divided into three horizontal sections, with the text in the top section and empty sections below. A blue arrow points from the top edge of the `detail::is_named_arg< T >` box to the bottom edge of the `std::false_type` box, indicating that `detail::is_named_arg< T >` inherits from `std::false_type`.
