

include/srsran/phy
/upper/signal_processors
/signal_processor_formatters.h

```
graph BT; A["lib/phy/upper/downlink_processor_single_executor_impl.cpp"] --> B["include/srsran/phy/upper/signal_processors/signal_processor_formatters.h"]; C["lib/phy/upper/signal_processors/signal_processor_factories.cpp"] --> B;
```

The diagram illustrates a header file inclusion relationship. At the top, a dark gray box contains the header file path: `include/srsran/phy/upper/signal_processors/signal_processor_formatters.h`. Below this, two light gray boxes represent source files. The left box contains `lib/phy/upper/downlink_processor_single_executor_impl.cpp` and the right box contains `lib/phy/upper/signal_processors/signal_processor_factories.cpp`. Two blue arrows point from the bottom of each source file box to the bottom of the header file box, indicating that both source files include the header.

lib/phy/upper/downlink
_processor_single_executor
_impl.cpp

lib/phy/upper/signal
_processors/signal_processor
_factories.cpp
