

std::false_type

```
graph BT; A["srsran::srsvec::detail::is_integral_span_compatible<T, typename>"] --> B["std::false_type"]
```

The diagram illustrates an inheritance relationship. At the bottom is a gray rectangular box representing the base class `srsran::srsvec::detail::is_integral_span_compatible<T, typename>`. It is divided into three horizontal sections, with the first section containing the class name. Above this box is a white rectangular box representing the derived class `std::false_type`, also divided into three horizontal sections, with the first section containing the class name. A blue arrow points from the top center of the gray box to the bottom center of the white box, indicating that `std::false_type` inherits from `srsran::srsvec::detail::is_integral_span_compatible`.

srsran::srsvec::detail
::is_integral_span_compatible
< T, typename >
