

options

```
classDiagram
    class options {
    }
    class "asn1::ngap::gnb_id_c::types_opts" {
    }
    options o-- "*" "asn1::ngap::gnb_id_c::types_opts" : +value
```

The diagram illustrates an aggregation relationship between two classes. The 'options' class is represented by a white rectangle with a black border, divided into three horizontal sections. The top section contains the text 'options', while the two bottom sections are empty. The 'asn1::ngap::gnb_id_c::types_opts' class is represented by a gray rectangle with a black border, also divided into three horizontal sections. The top section contains the text 'asn1::ngap::gnb_id_c::types_opts', the middle section is empty, and the bottom section contains the text '+ to_string()'. A blue line connects the bottom of the 'options' class to the top of the 'asn1::ngap::gnb_id_c::types_opts' class, ending in a blue diamond. To the right of this line, the text '+value' is written in gray.

+value

asn1::ngap::gnb_id
_c::types_opts

+ to_string()
