

std::true_type

```
graph BT; A[is_char< char16_t >] --> B[std::true_type]
```

The diagram illustrates an inheritance relationship between two C++ type traits. At the bottom is a gray box representing the base trait, `is_char< char16_t >`. It has three horizontal sections, with the top one containing the text. Above it is a white box representing the derived trait, `std::true_type`. It also has three horizontal sections, with the top one containing the text. A blue arrow points from the top section of the gray box to the bottom section of the white box, indicating that `std::true_type` inherits from `is_char< char16_t >`.

is_char< char16_t >
