

options

The diagram consists of two main components. At the top is a white box with a black border, divided into three horizontal sections. The top section contains the text 'options', while the two bottom sections are empty. A blue line extends downwards from the bottom of this box, ending in a blue diamond. To the right of the line, the text '+value' is written in gray. The diamond connects to the top of a larger, gray-shaded box below. This gray box is divided into three horizontal sections. The top section contains the text 'asn1::rrc_nr::affected', '_carrier_freq_r16_s::interference', and '_direction_r16_opts' stacked vertically. The middle section is empty. The bottom section contains a plus sign followed by the text 'to_string()'.

+value

asn1::rrc_nr::affected
_carrier_freq_r16_s::interference
_direction_r16_opts

+ to_string()
