

options

```
classDiagram
    class options {
        <empty>
        <empty>
    }
    class "asn1::ngap::cell_id_list_for_restart_c::types_opts" {
        <empty>
        + to_string()
    }
    options o--> "asn1::ngap::cell_id_list_for_restart_c::types_opts" : +value
```

The diagram shows a class 'options' at the top with two empty rectangular compartments. Below it is a class 'asn1::ngap::cell_id_list_for_restart_c::types_opts' with three compartments: the top one is empty, the middle one is empty, and the bottom one contains the text '+ to_string()'. A blue line with an open diamond at the 'options' end connects the two classes. To the right of the line, the text '+value' is written.

+value

asn1::ngap::cell_id
_list_for_restart_c
::types_opts

+ to_string()
