

std::false_type

```
classDiagram
    class is_char["is_char< T >"]
    class std_false_type["std::false_type"]
    is_char --|> std_false_type
```

The diagram illustrates a C++ inheritance relationship. At the bottom is a class box for `is_char< T >`, which is shaded gray and divided into three horizontal sections. Above it is a class box for `std::false_type`, which is white and also divided into three horizontal sections. A blue arrow with an open triangular head points from the top section of the `is_char< T >` box to the bottom section of the `std::false_type` box, indicating that `is_char< T >` inherits from `std::false_type`.

is_char< T >
