

options

```
classDiagram
    class options {
    }
    class fail_report_scg_s_fail_type_opts {
        + to_string()
        + to_number()
    }
    options o--fail_report_scg_s_fail_type_opts : +value
```

The diagram illustrates an aggregation relationship between two classes. The 'options' class is represented by a white rectangle with a black border, divided into three horizontal sections. The top section contains the text 'options', while the two bottom sections are empty. The 'asn1::rrc_nr::fail_report_scg_s::fail_type_opts' class is represented by a gray rectangle with a black border, divided into three horizontal sections. The top section contains the text 'asn1::rrc_nr::fail_report_scg_s::fail_type_opts', the middle section is empty, and the bottom section contains two lines of text: '+ to_string()' and '+ to_number()'. A blue line connects the bottom of the 'options' class to the top of the 'asn1::rrc_nr::fail_report_scg_s::fail_type_opts' class, ending in a blue diamond. To the right of this line is the text '+value'.
