

ErrorHandler

```
classDiagram
    class ErrorHandler
    class detail_char_specs_checker["detail::char_specs_checker< ErrorHandler >"]
    detail_char_specs_checker --|> ErrorHandler
```

The diagram shows a class hierarchy. At the top is the 'ErrorHandler' class, represented by a rectangle with three horizontal compartments. The top compartment contains the class name. Below it are two empty compartments. At the bottom is the 'detail::char\_specs\_checker< ErrorHandler >' class, represented by a shaded rectangle with three horizontal compartments. The top compartment contains the class name. The middle compartment is empty. The bottom compartment contains three public methods: '+ char\_specs\_checker()', '+ on\_int()', and '+ on\_char()'. A blue arrow with an open triangular head points from the 'detail::char\_specs\_checker' class to the 'ErrorHandler' class, indicating inheritance.

detail::char\_specs  
\_checker< ErrorHandler >

+ char\_specs\_checker()  
+ on\_int()  
+ on\_char()
