

ErrorHandler

```
classDiagram
    class ErrorHandler
    class detail_char_specs_checker["detail::char_specs_checker< ErrorHandler >"]
    detail_char_specs_checker --|> ErrorHandler
```

The diagram shows a class hierarchy. At the top is a class box for 'ErrorHandler' with two empty compartments. Below it is a class box for 'detail::char\_specs\_checker< ErrorHandler >' with a header compartment and a body compartment containing three methods. A blue arrow with an open triangle head points from the checker class to the ErrorHandler class, indicating inheritance.
