

std::true_type

```
classDiagram
    class std_true_type["std::true_type"]
    class srslog_detail_is_in_place_type_t["srslog::detail::is_in_place_type_t< in_place_type_t< T > >"]
    std_true_type <|-- srslog_detail_is_in_place_type_t
```

The diagram illustrates an inheritance relationship. At the top is a white box representing the `std::true_type` class, which is divided into three horizontal sections. Below it is a gray box representing the `srslog::detail::is_in_place_type_t< in_place_type_t< T > >` class, also divided into three horizontal sections. A blue arrow with an open triangular head points from the top section of the gray box to the bottom section of the white box, indicating that the gray class inherits from the white class.

srslog::detail::is
_in_place_type_t< in
_place_type_t< T > >
