

options

```
classDiagram
    class options {
        <empty>
        <empty>
    }
    class "asn1::flap::paging_prio_opts" {
        +to_string()
        +to_number()
    }
    options o--> "asn1::flap::paging_prio_opts" : +value
```

The diagram shows a class 'options' at the top with two empty compartments. Below it is a class 'asn1::flap::paging_prio_opts' with two compartments: the top one contains the name and the bottom one contains two methods, '+ to_string()' and '+ to_number()'. A blue line with an open diamond at the 'options' end connects to the top of the 'asn1::flap::paging_prio_opts' class. The label '+value' is placed to the right of the line.

+value

asn1::flap::paging
_prio_opts

+ to_string()

+ to_number()
