

options

```
classDiagram
    class options {
    }
    class "asn1::flap::broadcast" {
        _m_rbs_failed_to_be_setup
        _item_ies_o::value_c::types_opts
    }
    options o-- "asn1::flap::broadcast" : +value
```

The diagram shows a class named 'options' at the top, represented by a rectangle with two empty compartments below the name. Below it is a larger, shaded gray rectangle representing the 'asn1::flap::broadcast' class. This class has three compartments: the top one contains the text 'asn1::flap::broadcast', the middle one contains '\_m\_rbs\_failed\_to\_be\_setup' and '\_item\_ies\_o::value\_c::types\_opts', and the bottom one contains a '+' sign followed by 'to\_string()'. A blue line connects the bottom of the 'options' class to the top of the 'asn1::flap::broadcast' class, ending in a hollow diamond, which signifies an aggregation relationship. To the right of this line, the text '+value' is written in gray.

+value

asn1::flap::broadcast  
\_m\_rbs\_failed\_to\_be\_setup  
\_item\_ies\_o::value\_c::types\_opts

+ to\_string()
