

std::true_type

```
classDiagram
    class std_true_type["std::true_type"]
    class detail_is_named_arg["detail::is_named_arg< named_arg< Char, T > >"]
    detail_is_named_arg --|> std_true_type
```

The diagram illustrates an inheritance relationship. A light gray box at the top represents the base class 'std::true_type', which is divided into three horizontal sections. Below it is a darker gray box representing the derived class 'detail::is_named_arg < named_arg< Char, T > >', also divided into three horizontal sections. A blue arrow with an open triangular head points from the top section of the derived class box to the bottom section of the base class box, indicating that 'detail::is_named_arg' inherits from 'std::true_type'.

detail::is_named_arg
< named_arg< Char, T > >
